InterEasts Environmental Policy

It is embedded within InterEast and the company's operations to work towards a sustainable society. We take our responsibility seriously to leave future generations with an equal opportunity to fulfil their goals and dreams as we were given. We strive to build a sustainable company that always push and promote innovation in our trade. Our commitment to the environment extends to our employees, clients, partners as well as the services that we provide.

InterEast Transport AB shall on every occasion sell qualified complete transport solutions based on clients' needs, society's requirements and the company's own prerequisites.

As such, we at InterEast shall:

- Cater to clients' needs and requests for environmentally sustainable transportation with consideration to our core values: trust, information accuracy, eastern expertise and business ethics.
- Strive for methods that facilitate continuous improvements for the environment and that decrease the organization's effect on the environment. These methods should also add value, not just for our immediate clients, but even for clients' clients in their own turn.
- Fulfill and endeavor to stay on-top of requirements laid by legislation, the society at large and our clients. As such the company shall, together with our suppliers, contribute to developing a community that is conscious of the environment and eco-cycle.
- Work proactively towards pollution prevention rather than reactively.
- Prioritizing providers who share and agree with the ambitions outlined in this Environment Policy.
- Decrease the company's own usage of finite resources.
